

CPSC 201 Tutorial: Submitting Homework Remotely

This is meant to be a brief guide to remotely submitting homework for CPSC 201.

1. Copying a local version of your homework to the zoo server.

In a terminal window, use the command `'cd /path/to/homework'`, to change directories to where your homework files are located. You can use the command `'ls'` to see the contents of your current directory, and the command `'pwd'` to display your current directory. Once you are in the directory with your homework files run the following command:

```
'scp filename(s) netid@node.zoo.cs.yale.edu:~/cs201'
```

If you have multiple files to copy, list them on the command line separated by a space. The `'scp'` command stands for secure copy and transfers files to the specified account. The `'~/cs201'` directs the files to the `cs201` directory on your zoo account.

2. Logging into the zoo from your laptop.

In a terminal window, use the following command to log into the zoo:

```
'ssh netid@node.zoo.cs.yale.edu'
```

Then use the command `'cd cs201'` to move into your `cs201` directory.

Use `'ls'` to verify that your homework files were successfully copied in step 1.

3. Running the submit script

Run the following command to submit your homework:

```
'/home/classes/cs201/bin/submit 0 filename(s)'
```

For future assignments, replace the `'0'` with whichever number assignment you are submitting.

Run the following command to check that your homework was submitted successfully:

```
'/home/classes/cs201/bin/check 0'
```

For each file you submitted, you should see a line resembling the following:

```
'-rw-r----- 1 netid cs201 1786 Jan 22 23:05 hw0.rkt'
```
