

```

make_banner(wall, "#", 1000000);
...
void make_banner(char dest[], char src[], int n)
{
    strcpy(dest, "");
    int len = strlen(src);
    for (int i = 0; i < n; i++)
    {
        strcat(dest, src);
    }
}

```

$\frac{n^2}{2} + \frac{3n}{2} + 1$  vs  $1000000n$   
 $\frac{1}{1000n^2}$  vs  $10^2 \cdot n$   
 $\Theta(n^2)$  vs  $\Theta(n)$

$\frac{n^2}{2} + \frac{3}{2}n + 1$   
 $\Theta(n^2)$

there is a large enough  $n_0$  s.t.  $f(n) \geq g(n)$  for all  $n > n_0$

```

void strcat(char dest[], char src[]) {
    int i = 0;
    while (dest[i] != '\0') { for n-char dest, n+1 executions
        i++;
    }
    int j = 0;
    while (src[j] != '\0') { dest[i] = src[j]; i++; j++; }
    dest[i] = '\0';
}

```
