

Array Destroy

Ownership

```
l1 = location_list_create();
l2 = ...
```

```
→ X = location_create(...)
→ foo(l1, X)
→ bar(l2, X) } trouble if foo, bar both transfer ownership
```

```
start = location_list_get(stops, 0);
```

should get return a ptr to existing or ptr to new copy? (alias)

location_dec_by(start) oops - list still owns element

location_move_to_antipode(start); change visible to list too

then must do changes don't show up

Array Add to Front
