Want to know how this impacts artists? Take this class!

AI is becoming an essential tool for not only scientists and engineers, but also for physicians, judges, artists, and presidents. This course is designed for all students, with no prerequisites, and will require no math background or programming. We will look at topics that range from job loss due to automation, how machine learning systems are impacting healthcare, the impact of language models on education, and many other topics from today's headlines. Students will learn some of the basic limits of this technology, understand how to critically analyze public claims made about AI, and understand the societal impact that AI is having.

No programming. No math. No final.
